発表テーマ／ **Presentation Topic**	Identification of Urban Activity Centers
発表のポイント／ **Point of Presentation**	Identifying areas of the city where people gather for various activities is necessary for understanding the urban structure and effective urban planning

プロフィール　Profile

自己紹介/Self-introduction

I am a government-sponsored (MEXT) PhD student in Architecture and Building Engineering at Tokyo Institute of Technology. My Bachelor's degree was in Social and Economic Geography, the first Master's degree was in Urban Studies and the second was in Architecture. In addition to the academic background developed in Russia, I have more than 4 years of study abroad and international research experience in countries like Belgium, the USA, and Japan.

研究分野について/About study field

Using spatial analysis and machine learning methods, I study places where people gather in megacities and develop methods for their identification by means of social media, open access, and commercial data. The current research objective is to study the network of such places in Tokyo from the perspective of their service zones and functional specificities.

視聴者へのメッセージ　Message to audience

I hope my presentation will demonstrate the importance of spatial methods not only for purely academic purposes within the field of Urban Studies but also for the development and implementation of effective urban planning measures.
