| 発表テーマ/ Presentation Topic | Examining linkage between Food & Nutrition Security & Socioeconomic Inequalities in India & South Asia |
| 発表のポイント/ Point of Presentation | Food and Nutrition Security are one of the most important determinant of human well-being. They are affected by several factors such as climate change, international policies, conflicts and socioeconomic factors such as poverty, education, ethnicity and religion. My research is to explore how and to what extent these socioeconomic factors influence food and nutrition security outcomes in India and South Asian region. |

| プロフィール Profile | |
| 自己紹介/Self-introduction | |
| <p>I am pursuing a PhD in Food and Nutrition Security in South Asia at the University of Tokyo, Japan, under the MEXT Scholarship. My research focuses on the drivers, challenges, and opportunities for improving the region's food systems and nutrition outcomes using mixed methods and interdisciplinary approaches. I hold a Master of Technology in Technology and Development from the Indian Institute of Technology, Bombay. I specialized in rural development and worked as a research fellow with UNICEF India on maternal and child health before joining Ph.D.</p> | |
| 研究分野について/About study field | |
| <p>My research topic is exploring association of socioeconomic determinants such as education, gender, poverty on food and nutritional security outcomes in India and South Asia region. I primarily use epidemiological and statistical analysis using cross-sectional datasets of India and other south asian countries.</p> | |
| 視聴者へのメッセージ Message to audience | |
| <p>I want to explain about my research as I feel Food & Nutrition Security is one of the most essential aspect of human well-being and with Climate Change, wars and recent pandemic have exacerbated this issue pushing a large population to extreme poverty, loss of livelihood and resulting nutrition and health related consequences.</p> | |
